## Knowledge

## Experience

## ~~Overfitting~~ Creativity

**Bias:** Simplifying assumptions a model makes to better understand the target function

**Variance:** Error from sensitivity to fluctuations in the training set.

regularisation

—

**Regularisation** is any modification made to the algorithm with an intention to lower generalisation error but NOT the training error!

# Regularisation

→ L1 or Lasso

→ L2 or ridge

# L1 Regularisation

$$Loss = Error(Y - \hat{Y}) + \lambda \sum_1^n |w_i|$$

# L2 Regularisation

$$Loss = Error(Y - \hat{Y}) + \lambda \sum_1^n w_i^2$$
